Was heated with old waste oil heater

1 only TWINHEAT – M20i/A2/500

Type M Series

The M system has an integrated fuel storage which is available in three sizes: 300, 500, 700 and 1,400 litres. The fuel storage is fitted with an efficient stirrer which ensures that fuels such as wood shavings and wood chips do not create bridging over the auger. A 500 litre storage is available with an automatic filling unit for connection to a larger external silo.

The M type is the perfect choice for the user wanting the benefits of a fully automatic filling unit while still retaining the option to burn solid wood with manual filling.

Manual Firing with Solid Wood

Water Cooled Burner Tube

OXYGEN CONTROL
Pre-set for wood pellets,
wood chips and grains

Fully Automatic Filling Unit

Shunt Valve

Exterior Silo
